- HTML, JavaScript
- Python
- Database Systems
- Snowflake, Postgres, MongoDB
- AWS
- Learning Management Systems
- Workday Learning, Docebo, Paradiso, Moodle
- E-learning Development
- Articulate 360 Suite
- Microsoft Suite

I am a Platform Operations Specialist with nearly 8 years of experience in EdTech and SaaS environments. I have used my background in computer science to build automation tools and migration solutions to support internal teams and solve customer issues. I have utilized Python and JavaScript to develop scripts to automate workflows and migrate data. I have decided to use my skills in operations and my knowledge of coding to move towards a Software Engineering Focused career.

Work History

August 2024

– June 2026

Platform Operations Specialist

ACI Learning, Colorado Springs, CO (remote)

- Provide technical support and troubleshooting on LMS and SaaS systems for internal teams and customers.
- Write Python scripts to migrate user data, course enrollments, and content between systems using REST APIs and AWS.
- Build automations to eliminate repetitive manual support tasks, improving response time.
- Partner with other engineers to reproduce bugs, conduct root cause analyses and fix issues in the backlog.
- Communicate technical solutions clearly to non-technical stakeholders.
- Document processes and reusable scripts to maintain an operations process manual.

July 2018 –

August 2024

Training Analyst, Designer and Administrator

USIC Locating Services, Indianapolis, IN

- Serve as technical point of contact for LMS integrations, user provisioning, and data-sync issues across HR and training platforms.
- Write Python and JavaScript automation scripts to streamline repetitive admin tasks and bulk updates.
- Migrate user data from Workday to Docebo and implement SSO for 10,000+ users.
- Build reports and dashboards to identify data issues and improve training operations.
- Collaborate cross-functionally with IT, HR, and vendors to resolve technical issues.

Dec. 2020 –

March 2021

Front-End Developer

Crisis Response Leader Training, Indianapolis, IN

- Develop and maintain web features using HTML, CSS, and JavaScript.
- Debug browser and UI issues across platforms.
- Work with stakeholders to implement usability improvements and technical fixes.
